**ABSTRACT**

A hinge for a vehicle flap is provided which includes a first hinge part (2), mounted on one of the door arrangement elements flap and flap frame, a second hinge part (3), mounted on the other door arrangement element, a hinge pin (4) which is linked with the first hinge part (2) and the second hinge part (3) so as to be pivoted about a first pivoting axis (S), and a lever arrangement (17), coupling the first hinge part (2) with the second hinge part (3). ~~Said~~ The lever arrangement comprises at least one first lever (20), ~~said the~~ the lever (20) being linked with the hinge part (2) located on the flap so as to be pivoted. The hinge allows for a safe and controlled opening and closing of an automotive flap. For this purpose, a fixing device (24) for a motor (16) is provided on the hinge part (2) disposed on the flap and the first lever (20) of the lever arrangement (17) is rotationally driven by ~~said the~~ the motor (16).
